Manifolds And Modular Forms Aspects Of Mathematics Volume 20:

Manifolds and Modular Forms Friedrich Hirzebruch, Thomas Berger, Rainer Jung, 2013-06-29 This book provides a comprehensive introduction to the theory of elliptic genera due to Ochanine Landweber Stong and others The theory describes a new cobordism invariant for manifolds in terms of modular forms The book evolved from notes of a course given at the University of Bonn After providing some background material elliptic genera are constructed including the classical genera signature and the index of the Dirac operator as special cases Various properties of elliptic genera are discussed especially their behaviour in fibre bundles and rigidity for group actions For stably almost complex manifolds the theory is extended to elliptic genera of higher level The text is in most parts self contained The results are illustrated by explicit examples and by comparison with well known theorems The relevant aspects of the theory of modular forms are derived in a separate appendix providing also a useful reference for mathematicians working in this field

Invariance Theory Peter B. Gilkey, 2018-05-02 This book treats the Atiyah Singer index theorem using the heat equation which gives a local formula for the index of any elliptic complex Heat equation methods are also used to discuss Lefschetz fixed point formulas the Gauss Bonnet theorem for a manifold with smooth boundary and the geometrical theorem for a manifold with smooth boundary The author uses invariance theory to identify the integrand of the index theorem for classical elliptic complexes with the invariants of the heat equation

Groups and Symmetries John P. Harnad, Pavel Winternitz, *Topological Invariants of Stratified Spaces* Markus Banagl, 2007-02-16 The central theme of this book is the restoration of Poincaré duality on stratified singular spaces by using Verdier self dual sheaves such as the prototypical intersection chain sheaf on a complex variety Highlights include complete and detailed proofs of decomposition theorems for self dual sheaves explanation of methods for computing twisted characteristic classes and an introduction to the author's theory of non Witt spaces and Lagrangian structures

Toric Topology Megumi Harada, 2008 Toric topology is the study of algebraic differential symplectic geometric combinatorial and homotopy theoretic aspects of a particular class of torus actions whose quotients are highly structured The combinatorial properties of this quotient and the equivariant topology of the original manifold interact in a rich variety of ways thus illuminating subtle aspects of both the combinatorics and the equivariant topology Many of the motivations and guiding principles of the field are provided by though not limited to the theory of toric varieties in algebraic geometry as well as that of symplectic toric manifolds in symplectic geometry This volume is the proceedings of the International Conference on Toric Topology held in Osaka in May June 2006 It contains about 25 research and survey articles written by conference speakers covering many different aspects of and approaches to torus actions such as those mentioned above Some of the manuscripts are survey articles intended to give a broad overview of an aspect of the subject all manuscripts consciously aim to be accessible to a broad reading audience of students and researchers interested in the interaction of the subjects involved We hope that this volume serves as an enticing invitation to this emerging field

Lattices and Codes Wolfgang

Ebeling,2012-12-06 The purpose of coding theory is the design of efficient systems for the transmission of information The mathematical treatment leads to certain finite structures the error correcting codes Surprisingly problems which are interesting for the design of codes turn out to be closely related to problems studied partly earlier and independently in pure mathematics This book is about an example of such a connection the relation between codes and lattices Lattices are studied in number theory and in the geometry of numbers Many problems about codes have their counterpart in problems about lattices and sphere packings We give a detailed introduction to these relations including recent results of G van der Geer and F Hirzebruch Let us explain the history of this book In LPS82 J S Leon V Pless and N J A Sloane considered the Lee weight enumerators of self dual codes over the prime field of characteristic 5 They wrote in the introduction to their paper The weight enumerator of anyone of the codes is strongly constrained it must be invariant under a three dimensional representation of the icosahedral group These invariants were already known to Felix Klein and the consequences for coding theory were discovered by Gleason and Pierce and independently by the third author It is worth mentioning that precisely the same invariants have recently been studied by Hirzebruch in connection with cusps of the Hilbert modular surface associated with $Q(\sqrt{5})$

Algebraic Structures and Moduli Spaces Jacques Hurtubise and Eyal Markman,

This book contains recent and exciting developments on the structure of moduli spaces with an emphasis on the algebraic structures that underlie this structure Topics covered include Hilbert schemes of points moduli of instantons coherent sheaves and their derived categories moduli of flat connections Hodge structures and the topology of affine varieties Two beautiful series of lectures are a particularly fine feature of the book One is an introductory series by Manfred Lehn on the topology and geometry of Hilbert schemes of points on surfaces and the other by Hiraku Nakajima and Kota Yoshioka explains their recent work on the moduli space of instantons over \mathbb{R}^4 The material is suitable for graduate students and researchers interested in moduli spaces in algebraic geometry topology and mathematical physics **Israel**

The Founders of Index Theory Shing-Tung Yau,2009 Index Theory is

one of the most exciting and consequential accomplishments of 20th century mathematics This book contemplates the four great mathematicians who developed index theory Sir Michael Atiyah Raoul Bott Friedrich Hirzebruch and I M Singer It presents a variety of material of a personal as well as mathematical nature This second edition of Founders of Index Theory remembers the late and much beloved Raoul Bott in the affectionate words of those three men as well as family members and

long time friends and colleagues What emerges is the portrait of a compelling mathematical mind informed by a warm and magnetic personality that was both a joy and inspiration to those who knew him This volume includes a generous collection of color and black and white photographs many rarely seen of the four principal figures together with their family friends and colleagues The Founders of Index Theory Second Edition is a valuable portrayal of four men who transformed mathematics in a profound manner and who belong to a class of researchers whose interest and influence transcend the conventional boundaries of mathematical fields *Pure and Applied Mathematics Quarterly*, 2009
