Libby,2012-12-06 This book was written with a dual purpose as a reference book for practicing engineers and as a textbook for students of prestressed concrete It represents the fifth generation of books on this subject written by its author Significant additions and revisions have been made in this edition Chapters 2 and 3 contain new material intended to assist the engineer in understanding factors affecting the time dependent properties of the reinforcement and concrete used in prestressing concrete as well as to facilitate the evaluation of their effects on prestress loss and deflection Flexural strength shear strength and bond of prestressed concrete members were treated in a single chapter in the of flexural strength has third edition Now in the fourth edition the treatment been expanded with more emphasis on strain compatibility and placed in Chapter 5 which is devoted to this subject alone Chapter 6 of this edition on flexural shear strength torsional strength and bond of prestressed reinforcement was expanded to include discussions of Compression Field Theory and torsion that were not treated in the earlier editions In similar fashion expanded discussions of loss of prestress deflection and partial prestressing now are presented separately in Chapter 7 Minor additions and revisions have been made to the material contained in the remaining chapters with the exception of xv xvi I PREFACE Chapter 17 This chapter which is devoted to construction considerations has important new material on constructibility and tolerances as related to prestressed concrete **PCI design handbook** ,1978 **PCI Journal** ,2008 **Connections between Steel and Concrete** Rolf Eligehausen,Werner Fuchs,Philipp Grosser,Giovacchino Genesio,2012-02-27 Anchorage by fasteners and composite structures of steel and concrete have seen dramatic progress in research technology and application over the past decades The understanding of the fundamental principles underlying both disciplines has significantly improved Concurrently there has been rapid growth in the development of sophisticated new products and the establishment of international directives and codes to ensure their safe and economical use in a wide range of engineered structures Although they deal with very similar problems the two disciplines have developed independently from each other To optimize the use of composite structures and fastenings to concrete however it is necessary to have knowledge of both the local behavior of the fastening system and the global behavior of the structure It became apparent that a forum offering the opportunity to expand and to exchange experience in

the field of connecting steel and concrete would benefit all involved Furthermore this forum would aid in the rapid dissemination of new ideas technologies and solutions as well as explore new areas of research This book forms the Proceedings of the 2 Symposium on Connections between Steel and Concrete As the 1 Symposium in 2001 it brought together leading experts from all facets of the research design construction and anchor manufacturing community from around the world Their lectures covered the topics test methods behavior and design dynamic loading shock earthquake fatigue durability exceptional applications strenghtening and structures related topicsIn total 129 papers are gathered in these 2 volumes 3rd fib Congress Washington USA FIB - International Federation for Structural Concrete,2010-06-01
