Physiology ,2011-06-01 Fish form an extremely diverse group of vertebrates At a conservative estimate at least 40% of the
world s vertebrates are fish On the one hand they are united by their adaptations to an aquatic environment and on the other
they show a variety of adaptations to differing environmental conditions often to extremes of temperature salinity oxygen
level and water chemistry They exhibit an array of behavioural and reproductive systems Interesting in their own right this
suite of adaptive physiologies provides many model systems for both comparative vertebrate and human physiologists This
four volume encyclopedia covers the diversity of fish physiology in over 300 articles and provides entry level information for
students and summary overviews for researchers alike Broadly organised into four themes articles cover Functional Thematic
and Phylogenetic Physiology and Fish Genomics Functional articles address the traditional aspects of fish physiology that are
common to all areas of vertebrate physiology including Reproduction Respiration Neural Sensory Central Effector
Endocrinology Renal Cardiovascular Acid base Balance Osmoregulation Ionoregulation Digestion Metabolism Locomotion
and so on Thematic Physiology articles are carefully selected and fewer in number They provide a level of integration that
goes beyond the coverage in the Functional Physiology topics and include discussions of Toxicology Air breathing Migrations
Temperature Endothermy etc Phylogenetic Physiology articles bring together information that bridges the physiology of
certain groupings of fishes where the knowledge base has a sufficient depth and breadth and include articles on Ancient
Fishes Tunas Sharks etc Genomics articles describe the underlying genetic component of fish physiology and high light their
