**PROLOG to Expert Systems** William E. Leigh, 1987      Expert Systems in Education and Training Thomas D. McFarland, Reese Parker, 1990 Recommended in ACM Computing Reviews 11 90 A nontechnical introduction to expert systems and intelligent computer assisted instruction designed to give educators and trainers the background and vocabulary they will need to assess the value of these technologies for instructional design and educational consulting      **Cybernetics and Systems '86** R. Trappl, 2012-12-06 This volume contains all papers presented at the Eighth European Meeting on Cybernetics and Systems Research 169 draft papers were submitted for evaluation In the process of careful refereeing 33 papers were rejected and the remaining authors were invited to submit final papers Out of these 119 were accepted for presentation at the conference and publication in this volume These papers were prepared by 173 scientists authors and co authors from 22 European and non European countries with different cultural social and economic structures Everybody tried hard to make this conference and its proceedings a true representation of state of the art research worldwide The members of the Programme Committee and the Chairmen of the Symposia were selected among the internationally leading scientists Great care was taken not to make this conference a European or even Austrian one We are happy and proud to hear that these European Meetings the name is a purely traditional one are recognized as the internationally leading conferences in cybernetics and systems research Important scientists from all over the world carefully prepare their papers containing their most recent research findings and then enjoy the discussions with their colleagues      *Expert Systems and Related Topics* Marlene A. Palmer, 1990-01-01 This comprehensive reference to all areas of expert systems and applications plus advanced related topics lets you spend your time reading expert systems literature rather than searching for it It gives you a source of historical perspectives and outlooks on the future of the field Whether you are a manager a developer or an end user or researcher *Expert Systems and Related Topics Selected Bibliography Guide to Information Sources* puts all the sources of expert systems literature at your fingertips      *Advanced Artificial Intelligence (Second Edition)* Zhongzhi Shi, 2019-08-05 The joint breakthrough of big data cloud computing and deep learning has made artificial intelligence AI the new focus in the international arena AI is a branch of computer science developing intelligent machine with imitating extending and augmenting human intelligence through artificial means and techniques to realize intelligent behaviour This comprehensive compendium consisting of 15 chapters captures the updated achievements of AI It is completely revised to reflect the current researches in the field through numerous techniques and strategies to address the impending challenges facing computer scientists today The unique volume is useful for senior or graduate students in the information field and related tertiary specialities It is also a suitable reference text for professionals researchers and academics in AI machine learning electrical electronic engineering and biocomputing      Intelligent Systems and Applications Kohei Arai, 2022-08-31 This book is a remarkable collection of chapters covering a wide domain of topics related

to artificial intelligence and its applications to the real world The conference attracted a total of 494 submissions from many academic pioneering researchers scientists industrial engineers and students from all around the world These submissions underwent a double blind peer reviewed process Of the total submissions 176 submissions have been selected to be included in these proceedings It is difficult to imagine how artificial intelligence has become an inseparable part of our life From mobile phones smart watches washing machines to smart homes smart cars and smart industries artificial intelligence has helped to revolutionize the whole globe As we witness exponential growth of computational intelligence in several directions and use of intelligent systems in everyday applications this book is an ideal resource for reporting latest innovations and future of AI Distinguished researchers have made valuable studies to understand the various bottlenecks existing in different arenas and how they can be overcome with the use of intelligent systems This book also provides new directions and dimensions of future research work We hope that readers find the volume interesting and valuable
