## **Neuroendocrine Aspects Of Reproduction:**

**The Neuroendocrine Aspects of Reproduction** Reid Norman, 2012-12-02 *Neuroendocrine Aspects of Reproduction* contains the proceedings of the Oregon Regional Primate Research Center's Second Symposium on Primate Reproductive Biology held in Beaverton Oregon on October 8-9 1982 The symposium provided a forum for discussing the neuroendocrinology of reproduction in primates and tackled topics ranging from delayed puberty as a factor in human evolution to gonadotropin releasing hormone neurons and pathways in the primate hypothalamus and forebrain Comprised of 18 chapters this book begins with an overview of some basic neuroendocrine mechanisms that influence reproductive processes followed by a discussion on control of the onset of puberty Control of ovulation in the rhesus macaque is considered along with hypothalamic regulation of gonadotropin secretion in women The next section deals with reproductive cyclicity in female primates and the extent to which the central nervous system participates in the control of such cyclicity Subsequent chapters explore the biological basis for the contraceptive effects of breastfeeding the effects of hyperprolactinemia on reproductive function in humans and neuroendocrine changes during menopausal flushes This monograph will be of interest to students practitioners and researchers in the fields of reproductive biology neuroendocrinology and physiology

**Neuroendocrine Aspects of Reproduction** Reid L. Norman, 1983 **Neuroendocrine Aspects of Reproduction** Reid L. Norman, 1983-01-01 *The Neuroendocrine Aspects of Reproduction* *Neuroendocrine Aspects of Reproduction in Female Protein-deficient Rats* William H. Fletcher, 1972 **Mammalian Reproductive Biology** F. H. Bronson, 1989 A unique interdisciplinary overview of the way mammals reproduce this volume synthesizes research done by laboratory physiologists behaviorists population ecologists and animal breeders F H Bronson has drawn together the disparate literature in these areas to provide students and researchers with a comprehensive and biologically integrated approach to the study of mammalian reproduction Each chapter presents a wealth of issues and questions summarizing the current consensus on interpretations as well as viable alternatives under debate The book is principally concerned with how environmental factors regulate reproduction Bronson proposes that a mammal's reproductive performance routinely reflects simultaneous regulation by several environmental factors that interact in fascinatingly complex ways Environment is defined broadly and the chapters give equal weight to ecological and physiological factors when considering how variables such as food availability ambient temperature photoperiod and social cues interact to regulate a mammal's reproduction Particular attention is given to seasonal breeding and a taxonomically arranged chapter underscores the importance of comparative and evolutionary biology to an understanding of mammalian reproduction *Mammalian Reproductive Biology* is a powerful argument for the value and importance of interdisciplinary approaches to research Its almost 1 500 references constitute the most comprehensive bibliography to date on this topic Bronson also gives detailed consideration to promising areas for future research Well organized carefully planned and clearly written this book will become standard reading for scientists

concerned with any aspect of mammalian biology *Research Awards Index*, 1986 **The Neuroendocrinology of Human Reproduction** Harold C. Mack, Alfred I. Sherman, 1971 **The Physiology of Reproduction** Ernst Knobil, Jimmy D. Neill, 1988 **Vertebrate Reproduction** Volker Blüm, 1986-07 Oral birth in the Australian gastric brooding frog *Rheobatrachus sUus 2* Preface I have deliberately chosen the title picture to the preface which shows the oral birth of a young gastric brooding frog *Rheobatrachus situs* to draw the reader's attention to the preface since I wish to explain why the book was written and illustrated in the way it now appears The book has grown out of the material of a lecture course taking 3 to 4 hours per week each semester that I have given for several years at the Ruhr University Bochum as the theoretical basis for an intensive 4 week practical course on vertebrate reproduction for students of biology For various reasons I am a hardened opponent of giving lecture notes to the students On the other hand I found that my students made great efforts to work through and supplement their own lecture notes by studying the literature However there are no suitable textbooks on vertebrate reproduction written in German and the standard work in this field is now several decades old and deals mainly with mammals The students were therefore often frustrated in their efforts given the limited time they had available I have therefore decided to present here the most important structural and functional aspects of vertebrate reproduction and include other material to extend the framework of my original lectures *Bibliography of Reproduction*, 1988

**Reproductive Physiology of Vertebrates** Ari Van Tienhoven, 1983 This book is a completely revised and updated second edition of a highly praised volume that was first published in 1968 Taking into account recent conceptual and technical advances the new edition examines and compares the reproductive mechanisms of different classes of vertebrates from cyclostomes to humans in a thorough and analytic manner Ari van Tienhoven is a uniquely qualified scientist with many years of research and teaching experience His fourteen chapters cover sex determination sexual development intersexes puberty anatomy of the reproductive system the testes the ovary reproductive cycles insemination and fertilization care of the embryo and fetus expulsion of the oocyte embryo or fetus reproduction and immunology reproductive behavior and environment and reproduction The author emphasizes the role of the H Y antigen in determining the sex of animals and gives particular attention to the evolutionary aspects of intersexes in fish He discusses the endocrinology of reproduction and he also deals with the role of light in controlling the timing of reproductive activity Many illustrations tables and references are included An important contribution to the fields of comparative endocrinology and reproduction this book will be a valuable text for advanced undergraduate and graduate students and an irreplaceable reference for zoologists in general and for specialists in reproductive physiology *Neurosciences Research Symposium Summaries*, 1972 **The Physiologic Basis of Gynecology and Obstetrics** David B. Seifer, Philip Samuels, Douglas A. Kniss, 2001 This book is the first text devoted to the interrelationship between science and clinical practice in gynecology and obstetrics The subject vital to a foundation in clinical practice is covered extensively in this volume The book is divided into three sections Basic Principles Gynecology and

Obstetrics The first section covers all topics relevant to the specialty chapters in the other two sections discuss a range of issues from normal life changes to the physiologic changes associated with abnormal conditions Also featured are several diagrams boxed material key points for review and a question and answer section *Vertebrate Reproduction* E. W. Jameson,1988-10-28 This text reference presents a unified treatment of vertebrate reproductive physiology and sexual interactions in the context of environmental responses Stresses the ecology and evolution of wild species integrating biochemical and genetic mechanisms with behavioral and environmental influences Addresses sex determination growth and development parental care fecundity and seasonality Presents results of many experimental studies and observations made in the wild In addition to having a large number of citations over 1400 this book is unique in its broad coverage and in its effort to explain ecology and evolution in terms of known physiological processes **Journal of Reproduction and Fertility. Symposium Report** ,1977 *Neurosciences Research Program Bulletin* Neurosciences Research Program,1971 *Male Reproduction* ,1969 *Journal of Endocrinological Investigation* ,1995 Oxford Reviews of Reproductive Biology H. M. Charlton,1994-06 Oxford Reviews of Reproductive Biology is published annually and provides an up to date and authoritative account of clinical mammalian and non mammalian problems in reproduction including physiological cellular and molecular aspects It is intended for all those working in the fields of reproduction fertility and sterility including lecturers research scientists clinicians veterinarians and postgraduate and undergraduate students This volume reviews on embryo maternal interactions in primates and the roles of the extracellular matrix and of adhesion molecules in gonadal function and implantation The early development of the male genital tract is covered in a review of the anti Mullerian hormone and the effects of age on reproductive processes are correlated in a further chapter Immunological aspects of reproduction on the female thymus are described and comparative studies are represented in a chapter on seasonal breeding in macropodial marsupials Finally a chapter on X and Y sperm separation brings us right up to date in this controversial area Journal of Reproduction and Fertility ,1993-05 Includes the Proceedings of the Society for the Study of Fertility
