Pattern And Process In Macroecology:

Pattern and Process in Macroecology Kevin Gaston, Tim Blackburn, 2008-04-15 Issues of scale have become increasingly important to ecologists This book addresses the structure of regional large scale ecological assemblages or communities and the influence this has at a local small scale level This macroecological perspective is essential for the broader study of ecology because the structure and function of local communities cannot be properly understood without reference to the region in which they are situated The book reviews and synthesizes the issues of current importance in macroecology providing a balanced summary of the field that will be useful for biologists at advanced undergraduate level and above These general issues are illustrated by frequent reference to specific well studied local and regional assemblages an approach that serves to relate the macroecological perspective which is perhaps often difficult to comprehend to the everyday experience of local sites Macroecology is an expanding and dynamic discipline The broad aim of the book is to promote an understanding of why it is such an important part of the wider program of research into ecology Summarises the current macroecological literature Provides numerous examples of key patterns Explicitly links local and regional scale processes Exploits detailed knowledge of one species assemblage to explore broad issues in the structuring of biodiversity [Tropical Biology and Conservation Management - Volume V](#) Kleber Del Claro, Paulo S. Island Biogeography Robert J. Whittaker, José María Fernández-Palacios, Thomas J. Matthews,2023-06-22 Island biogeography is the study of the distribution and dynamics of species in island environments Due to their isolation from more widespread continental species islands are ideal places for unique species to evolve but they are also places of concentrated extinction Consequently they are widely studied by ecologists evolutionary biologists and conservationists This accessible textbook builds on the success and reputation of its predecessors documenting the recent advances in this exciting field and explaining how islands have contributed to both theory development and testing In addition the book describes the main processes of island formation subsequent dynamics

and eventual demise explaining the relevance of island environmental history to island biogeography The authors demonstrate the significance of islands as hotspots of biodiversity and of prehistoric and historic anthropogenic extinction Since island species continue to feature disproportionately in the lists of threatened species today the book examines both the chief threats to their persistence and some of the mitigation measures that can be put in play with conservation strategies specifically tailored to islands

The Macroecological Perspective José Alexandre Felizola Diniz-Filho, 2023-11-27 This comprehensive volume discusses the patterns and processes analyzed in macroecology with a distinct look at the theoretical and methodological issues underlying the discipline as well as deeper epistemological matters The book serves as a synthesis of macroecological literature that has been published since Brown and Maurer proposed and defined the term macroecology in 1989 Author Jos Alexandre Felizola Diniz Filho draws from the different disciplines and branches ecology evolutionary biology physiology behavioral sciences climatology and paleontology that make up macroecology to present a full holistic picture of where the discipline stands Through ten chapters Diniz Filho moves from a discussion of what macroecology actually is to macroecological modeling to the more applied side of the discipline covering topics such as richness and diversity patterns and patterns in body size The book concludes with a synthesis of how macroecological research is done in a theoretical and operational sense as well as unifying explanations for each of the macroecological patterns discussed moving on to evaluate which theories and models are still useful and which ones can be abandoned The book is intended for academics young researchers and students interested in macroecology and conservation biogeography In addition because of the integrative nature of macroecology and the theoretical and methodological background in the book it can be of interest to researchers working in related fields including but not limited to ecology and evolutionary biology

Macroecology is an approach to science that emphasizes description and explanation of patterns and processes at large spatial and temporal scales Some liken it to seeing the forest through the trees an apt ecological use of the proverbial phrase The term itself was introduced to modern literature by our authors James Brown and Brian Maurer in a seminal science paper in 1989 We then published books by both of these authors including Brown's *Macroecology* in 1995 which quickly traveled to the shelf of classics in ecology credited with cohering and inspiring a subfield of ecology proper While macroecology is to many a modern subfield the large scale perspective it advocates is implicit in earlier publications For example in 1898 de Liocourt studied the influence of management practices on the structure of French fir forests and characterized the distribution of tree size in three different stands His findings that in natural areas the number of trees declined exponentially with increasing diameter of the trunk allowed him to draw conclusions about the influence of management practices on tree distribution patterns Similarly other classic macroecological patterns including the species area relationship latitudinal gradient of species richness relationship between body size and metabolic rate species

abundance distribution and species body size distribution were identified decades sometimes even centuries ago. Consequently despite the scant twenty years that has elapsed since the term was coined macroecology has a deep and rich history. Foundations of Macroecology traces and coheres that history charting an evolutionary trajectory to the rigorous macroecological research landscape science enjoys today. The forty six papers span eight decades from 1920 to 1998 and include divergent perspectives of space time and taxonomic and habitat affiliation. They are organized into two main parts: Macroecology before Macroecology and Dimensions of Macroecology. The latter is further subdivided into six sections reflecting the subject matter: Allometry and Body Size, Evolutionary Dynamics, Abundance and Distributions, Species Diversity, and Methodological Advances. For each reprinted paper a macroecologist specializing in that area has written original commentary that places the paper in a broader context and explains why it is foundational.
