Nijhout, 2017-08-29 This book facilitates an integrative understanding of the development genetics and evolution of butterfly wing patterns To develop a deep and realistic understanding of the diversity and evolution of butterfly wing patterns it is essential and necessary to approach the problem from various kinds of key research fields such as evo devo eco devo developmental genetics ecology and adaptation food plants and theoretical modeling The past decade and a half has seen a veritable revolution in our understanding of the development genetics and evolution of butterfly wing patterns In addition studies of how environmental and climatic factors affect the expression of color patterns has led to increasingly deeper understanding of the pervasiveness and underlying mechanisms of phenotypic plasticity In recognition of the great progress in research on the biology an international meeting titled Integrative Approach to Understanding the Diversity of Butterfly

Wing Patterns IABP 2016 was held at Chubu University Japan in August 2016 This book consists of selected contributions from the meeting Authors include main active researchers of new findings of corresponding genes as well as world leaders in both experimental and theoretical approaches to wing color patterns The book provides excellent case studies for graduate and undergraduate classes in evolution genetics genomics developmental biology ecology biochemistry and also theoretical biology opening the door to a new era in the integrative approach to the analysis of biological problems This book is open access under a CC BY 4 0 license

**Cell Signalling in Prokaryotes and Lower Metazoa** I. Fairweather,2013-11-11 Cell signalling lies at the heart of many biological processes and currently is the focus of intense research interest In multicellular organisms it is central to how different types of cell communicate with each other and how they detect and respond to extracellular signals Intercellular communication is vital to single celled organisms as well allowing them to respond to environmental cues and signals To date much of the understanding of signalling mechanisms has come from research on specific cell types eg mouse lymphocyte and cardiomyocyte or on organisms in which communication systems such as nervous and endocrine systems are well established This volume therefore aims to fill the gap by concentrating on simple organisms where the elements of those signalling systems first evolved Many of the groups covered contain important pathogens or parasites and the potential for manipulating signalling pathways for therapeutic intervention will be highlighted
