Ontologies And Databases:

Ontologies and Databases Athman Bouguettaya,2013-03-09 Ontologies and Databases brings together in one place important contributions and up to date research results in this fast moving area Ontologies and Databases serves as an excellent reference providing insight into some of the most challenging research issues in the field Semantic Web, Ontologies and Databases Vassilis Christophides,Martine Collard,Claudio Gutierrez,2008-07-14 This book constitutes the thoroughly refereed post conference proceedings of the joint International Workshops on Semantic Web Ontologies and Databases SWDB ODBIS 2007 co located with the 33rd International Conference on Very Large Data Bases VLDB 2007 held in Vienna Austria in September 2007 The 7 revised full papers presented together with 1 invited paper were carefully selected from 11 submissions Among the topics addressed are semantics aware data models and query languages ontology based views mapping transformations and query reformulation and storing and indexing semantic Web data and schemas

Ontologies-Based Databases and Information Systems Martine Collard,2007-09-13 This book constitutes the refereed post proceedings of the First and Second VLDB Workshop Ontologies based techniques for DataBases and Information Systems held in Trondheim Norway September 2005 and Seoul Korea September 2006 The topics include ontology based interoperability and schema matching management of ontological bases and links between ontologies and knowledge

Materials Science and Engineering Joseph Glick,2013-07-10 The discipline of informatics emerged from the need to translate biomedical research into evidence based healthcare protocols and policy Materials science informatics is rooted in an analogous need to translate physical sciences research and discoveries into materials based solutions to address a broad range of issues and challenges for business government and the environment Ontologies and databases are key elements of translational architectures and therefore are fundamental tools of the practice of informatics Databases are tools for engineering data and information while ontologies are tools for engineering knowledge and utility Since knowledge and utility are the core objectives of informatics correctly understanding and utilizing ontologies is critical to the development of effective materials informatics programs and tools Rooted in philosophy the term ontology appears most frequently today in connection with semantic web technology where it refers to vocabularies used by inference engines to interpret human use of language Materials science ontologies need to capture the scientific context of the defined concepts to support modeling and prediction of multidimensional structure property relationships in variable environments and applications Addressing the complexity of materials science ontologies requires a significant departure from traditional database and semantic web ontology approaches including the use of neural networks that are capable of implementing methods for modeling context relevance complex systems and human expertise Pioneering efforts in this space include the Knowledge Engineering for Nanoinformatics Pilot KENI launched by the Nanoinformatics Society in 2010 and a collaborative Materials Genome Modeling Methodology initiative led by Iowa State University and initiated in 2011 **Advances in Databases and**

Information Systems Johann Eder, Mária Bieliková, A Min Tjoa, 2011-09-15 This book constitutes the refereed proceedings of the 15th International Conference on Advances in Databases and Information Systems ADBIS 2011 held in Vienna Austria in September 2011 The 30 revised full papers presented together with 2 full length invited talks were carefully reviewed and selected from 105 submissions They are organized in topical sections on query processing data warehousing DB systems spatial data information systems physical DB design evolution integrity security and data semantics Ontologies Dieter Fensel, 2013-03-09 This second edition systematically introduces the notion of ontologies to the non expert reader and demonstrates in detail how to apply this conceptual framework for improved intranet retrieval of corporate information and knowledge and for enhanced Internet based electronic commerce He also describes ontology languages XML RDF and OWL and ontology tools and the application of ontologies In addition to structural improvements the second edition covers recent developments relating to the Semantic Web and emerging web based standard languages *Theory and Practice of Model Transformation* Arend Rensink, Jesús Sánchez Cuadrado, 2018-06-18 This book constitutes the refereed proceedings of the 11th International Conference on Model Transformation ICMT 2018 held as part of STAF 2018 in Toulouse France in June 2018 The 9 full papers were carefully reviewed and selected from 24 submissions This book also presents 1 invited paper The papers include research application and tool demonstration papers presented in the context of four sessions on verification of model transformations model transformation tools transformation reuse and graph transformations **Semantic Web Services for Web Databases** Mourad Ouzzani, Athman Bouguettaya, 2011-10-23 Semantic Web Services for Web Databases introduces an end to end framework for querying Web databases using novel Web service querying techniques This includes a detailed framework for the query infrastructure for Web databases and services Case studies are covered in the last section of this book Semantic Web Services For Web Databases is designed for practitioners and researchers focused on service oriented computing and Web databases **Handbook of Research on Innovations in Database Technologies and Applications** Viviana E. Ferraggine, Jorge H. Doorn, Laura C. Rivero, 2009-01-01 This book provides a wide compendium of references to topics in the field of the databases systems and applications Provided by publisher Database and Expert Systems Applications Kim V. Andersen, John Debenham, Roland Wagner, 2005-09-14 DEXA 2005 the 16th International Conference on Database and Expert Systems Applications was held at the Copenhagen Business School Copenhagen Denmark from August 22 to 26 2005 The success of the DEXA series has partly been due to the way in which it has kept abreast of recent developments by spawning specialized workshops and conferences each with its own proceedings In 2005 the DEXA programme was co located with the 7th International Conference on Data Warehousing and Knowledge Discovery DaWaK 2005 the 6th International Conference on Electronic Commerce and Web Technologies EC Web 2005 the 4th International Conference on Electronic Government EGOV 2005 the 2nd International Conference on Trust Privacy and Security in Digital Business TrustBus 2005 the 2nd International Conference on Industrial Applications of Holonic and Multi

agent Systems HoloMAS 2005 as well as 19 specialized workshops These proceedings are the result of a considerable amount of hard work Beginning with the preparation of submitted papers the papers went through the reviewing process This process was supported by online discussion between the reviewers to determine the final conference program The authors of accepted papers revised their manuscripts to produce this fine collection DEXA 2005 received 390 submissions and from those the Program Committee selected the 92 papers in these proceedings This year the reviewing process generated more than 1000 referee reports The hard work of the authors the referees and the Program Committee is gratefully acknowledged

Ontological Engineering Asunción Gómez-Pérez, Mariano Fernandez-Lopez, Oscar Corcho, 2010-10-22 Ontological Engineering refers to the set of activities that concern the ontology development process the ontology life cycle the methods and methodologies for building ontologies and the tool suites and languages that support them During the last decade increasing attention has been focused on ontologies and Ontological Engineering Ontologies are now widely used in Knowledge Engineering Artificial Intelligence and Computer Science in applications related to knowledge management natural language processing e commerce intelligent integration information information retrieval integration of databases b informatics and education and in new emerging fields like the Semantic Web Primary goals of this book are to acquaint students researchers and developers of information systems with the basic concepts and major issues of Ontological Engineering as well as to make ontologies more understandable to those computer science engineers that integrate ontologies into their information systems We have paid special attention to the influence that ontologies have on the Semantic Web Pointers to the Semantic Web appear in all the chapters but specially in the chapter on ontology languages and tools

Data Mining with Ontologies: Implementations, Findings, and Frameworks Nigro, Hector Oscar, Gonzalez Cisaro, Sandra Elizabeth, Xodo, Daniel Hugo, 2007-07-31 Prior knowledge in data mining is helpful for selecting suitable data and mining techniques pruning the space of hypothesis representing the output in a comprehensible way and improving the overall method This book examines methodologies and research for the development of ontological foundations for data mining to enhance the ability of ontology utilization and design Provided by publisher

Web Semantics & Ontology Taniar, David, Rahayu, Johanna Wenny, 2006-02-28 This book provides an overview of current research and development activities in the area of web semantics and ontology giving an in depth description of

different issues including modeling using ontologies in enterprise systems querying and knowledge discovering of ontologies Provided by publisher *Ontosync* Andreas Kupfer,2010 **Formal Ontology in Information Systems** Achille C. Varzi,Laure Vieu,2004 Just as ontology developed over the centuries as part of philosophy so in recent years ontology has become intertwined with the development of the information sciences Researchers in such areas as artificial intelligence formal and computational linguistics biomedical informatics conceptual modeling knowledge engineering and information retrieval have come to realize that a solid foundation for their research calls for serious work in ontology understood as a general theory of the types of entities and relations that make up their respective domains of inquiry In all these areas attention has started to focus on the content of information rather than on just the formats and languages in terms of which information is represented A clear example of this development is provided by the many initiatives growing up around the project of the Semantic Web And as the need for integrating research in these different fields arises so does the realization that strong principles for building well founded ontologies might provide significant advantages over ad hoc case based solutions The tools of Formal Ontology address precisely these needs but a real effort is required in order to apply such philosophical tools to the domain of Information Systems Reciprocally research in the information science raises specific ontological questions which call for further philosophical investigations *Biological Database Modeling* Jake Chen,Amandeep S. Sidhu,2008 This cutting edge resource helps professionals and researchers master the next generation of biological database modeling techniques The book shows how to representing complex biological concepts and their evolving data structures This highly accessible volume presents innovative biological databases modeling concepts methods and software tools that are integrated with case studies in genomics functional genomics proteomics and drug discovery projects Breaking new ground at the intersection of high throughput biology bioinformatics and data management this essential resource offers comprehensive coverage of Public Biological Databases for Omics Studies in Medicine Modeling Biomedical Data Fundamentals of Gene Ontology Protein Ontology Information Quality Management Challenges for High Throughput Data Data Management for Fungal Genomics Microarray Data Management Data Management in Expression Based Proteomics Model Driven Drug Discovery Information Management and Interaction in High Throughput Screening for Drug Discovery **Ontologies for Urban Development** Jacques Teller,2007-06-05 Action C21 of the European programme for Cooperation in the field of Scientific and Technical Research COST <http://www.cost.esf.org> is dedicated to investigating urban ontologies for an improved communication in urban civil engineering projects The Action known informally as *Towntology* brings together a large and heterogeneous grouping from across Europe whose interests range from construction to urban tourism and from transport infrastructure to resource visualisation On 6-7 November 2006 in Geneva the Action convened a successful workshop to address emerging issues in the field This volume presents the contributions to that workshop in many cases revised afterwards to capture some of the outcomes of discussion Many of these contributions are from members of the

Towntology group but there are also contributions from other European researchers and from researchers in the US The volume represents a valuable overview of major current issues in the field of urban ontologies and encapsulates many useful and different approaches We hope that it will serve not only as a worthy outcome of Action C21 but also as a valuable resource for a wide range of researchers
