Nuclear Fission And Cluster Radioactivity:

Clustering Phenomena in Atoms and Nuclei Marten Brenner, Tom Lönnroth, F. Bary Malik, 1992-05-25 In these days of specialization it is important to bring together physicists working in diverse areas to exchange and share their ideas and excitement This leads to cross fertilization of ideas and it enriches as in biological systems a specialized field with new strength development and direction derived from another area Although this might be an uncommon thing it is an important step in our understanding of the physical world around us which is after all the main purpose of physics The seed for this conference was really sowed when one of us MB and Mr Manngrd showed some scattering data at backward angles to FBM one summer about four years ago That occasion led to a long research collaboration between the Abo Akademi physicists and other scientists in several countries The actual idea to explore the possibility of holding a conference however crystallized in the summer of 1989 during a visit of FBM to Abo Akademi The final decision to organize a conference was made after MB visited Professor Ben Mottelson in Copenhagen and Professor Anagnostatos in Athens At this point it was recognized that there are similarities as well as differences between clustering phenomena in nuclei and systems consisting of atoms It was therefore conjectured that it could be very stimulating to bring together these groups to exchange their ideas and to learn from each other's fields A conference along these lines we hoped would contribute to an increased mutual understanding

Theory of Particle and Cluster Emission Doru S. Delion, 2010-11-10 Nowadays experimental nuclear physics pushes its limits towards highly unstable nuclei The theoretical description of proton rich and neutronrich nuclei or superheavy elements has become an important part of the modern nuclear physics The main tool to investigate such unstable nuclei concerns radioactive decays from proton emission to fission processes We review the main theoretical methods describing decay processes induced by the strong interaction like Coupled channels method for Gamow resonances R matrix theory Distorted wave approach Semiclassical approach Multi step and Two center shell model Thus most of the book is addressed to a broad audience within the nuclear physics community Secondly this book is an attempt to clarify some fundamental aspects connected with the fine structure or anisotropy in alpha decay and ternary cold fission Finally the self consistent microscopic theory of the alpha decay is analyzed

Latest Advances in Atomic Cluster Collisions Andrey Solov'Yov, 2008 This book presents a snapshot of the most recent and significant advances in the field of cluster physics It is a comprehensive review based on contributions by the participants of the 2nd International Symposium on Atomic Cluster Collisions ISACC 2007 held in July 19-23 2007 at GSI Darmstadt Germany The purpose of the Symposium is to promote the growth and exchange of scientific information on the structure and properties of nuclear atomic molecular biological and complex cluster systems studied by means of photonic electronic heavy particle and atomic collisions Particular attention is devoted to dynamic phenomena many body effects taking place in cluster systems of a different nature These include problems of fusion and fission fragmentation collective electron excitations phase transitions etc Both the

experimental and theoretical aspects of cluster physics uniquely placed between nuclear physics on the one hand and atomic molecular and solid state physics on the other are discussed Clusters in Nuclei, 2010 Radiation and Radioactivity on Earth and Beyond Ivan G.
