

Choking Prevention

NURSE'S NOTES

Choking is a common breathing emergency that occurs when the airway is partially, or completely blocked.

Signs of choking include, face turning red, lips turning blue, food spilling out of the mouth, inability to talk, wide eyes, or unconsciousness.

For people with disabilities, eating the wrong diet texture and lack of needed supervision are the leading causes of choking-related incidents.

Other contributing choking factors can be, staff not familiar with person's prescribed diet, not chewing food completely, and eating too quickly.

Caregivers should provide physical support as needed, offer slow teaspoon-size bites, and acquire an assessment of the person's eating and swallowing skills.

If someone is choking, follow first aid/CPR training, call 911, and perform abdominal thrusts along with back blows. Move person to a hard, flat surface if need be and initiate CPR.

If you are alone and choking dial 911 if you are able to, make a fist with one hand, place the thumb of that hand below your rib cage and above your navel, grasp your fist with your other hand, and press your fist forcibly into the upper abdominal area with a quick upward movement. You may lean over a chair or counter to help with the thrust. Remember, caregivers successfully intervene with choking numerous times each year saving lives!

Solid Starts for Babies Solid Starts, 2025-04-01 NATIONAL BESTSELLER
The definitive guide to introducing real food to babies from the board-certified experts on baby-led weaning and feeding, trusted by millions of parents around the world. Like a conversation with a trustworthy friend who is also a seasoned pediatric expert, Tina Payne Bryson, PhD, New York Times bestselling co-author of *The Whole Brain Child* and *No Drama Discipline* and author of *The Bottom Line for Baby-Led*, by a multidisciplinary team of licensed pediatric feeding professionals, *Solid Starts* has emerged as the go-to resource for modern families searching for a research-based approach to solid food introduction to babies. In their debut book, they debunk the myth that baby food is necessary and show how, from the moment that baby is ready to begin the transition from breast or bottle to solid food, baby can enjoy almost any food, the same food that you want to eat, with some basic safety modifications. In this book, they share how to cultivate curiosity, build trust at the table, and get out of the way at mealtime so babies can do what they were born to do: eat. How the early introduction to many flavors and textures before age one builds baby's palate and familiarity with food before the opinionated toddler years. Why food need not be pureed and why six-month-old babies are developmentally capable of eating real food. Why allowing baby to grab, hold, and eat food on their own maximizes sensory motor learning, fosters problem-solving skills, and can actually decrease the risk of choking. The nutritional, developmental, and psychological benefits to sharing the same food that you like to eat with baby. Techniques and guidance for sharing family meals with baby during each development window from four months of age through early toddlerhood. The latest evidence on choking safety, food allergens, nutrition, food shapes and sizes, and how recommendations are rapidly changing. With practical, research-backed strategies, *Solid Starts for Babies* helps parents nurture confidence and sets up families for mealtime joy.
