

WHAT IS GRAVITY?

Gravity is the force by which a planet or other body draws objects toward its center.

Gravity is what holds the planets in orbit around the sun and what keeps the moon in orbit around the Earth.

In 1687 **Isaac Newton** formulated the **Gravitational Theory** holding that the force of attraction between two bodies is proportional to the product of their masses.

To calculate the force of gravity, physicists use the formula **$f = ma$** (*force = mass x acceleration*).
