Methodology For Uncertainty In Knowledge:

A Methodology for Uncertainty in Knowledge-Based Systems Kurt Weichselberger, Sigrig Pöhlmann, 1990-03-07 In this book the consequent use of probability theory is proposed for handling uncertainty in expert systems It is shown that methods violating this suggestion may have dangerous consequences e g the Dempster Shafer rule and the method used in MYCIN The necessity of some requirements for a correct combining of uncertain information in expert systems is demonstrated and suitable rules are provided The possibility is taken into account that interval estimates are given instead of exact information about probabilities For combining information containing interval estimates rules are provided which are useful in many cases

Uncertainty Modelling In Knowledge Engineering And Decision Making - Proceedings Of The 12th International Flins Conference (Flins 2016) Xianyi Zeng, Jie Lu, Etienne E Kerre, Luis Martinez, Ludovic Koehl, 2016-07-14 FLINS originally an acronym for Fuzzy Logic and Intelligent Technologies in Nuclear Science is now extended to include Computational Intelligence for applied research The contributions to the 12th of FLINS conference cover state of the art research development and technology for computational intelligence systems both from the foundations and the applications points of view

Uncertainty and Vagueness in Knowledge Based Systems Rudolf Kruse, Erhard Schwecke, Jochen Heinsohn, 2012-12-06 The primary aim of this monograph is to provide a formal framework for the representation and management of uncertainty and vagueness in the field of artificial intelligence It puts particular emphasis on a thorough analysis of these phenomena and on the development of sound mathematical modeling approaches Beyond this theoretical basis the scope of the book includes also implementational aspects and a valuation of existing models and systems The fundamental ambition of this book is to show that vagueness and un certainty can be handled adequately by using measure theoretic methods The presentation of applicable knowledge representation formalisms and reasoning algorithms substantiates the claim that efficiency requirements do not necessarily require renunciation of an uncompromising mathematical modeling These results are used to evaluate systems based on probabilistic methods as well as on non standard

concepts such as certainty factors fuzzy sets or belief functions The book is intended to be self contained and addresses researchers and practitioners in the field of knowledge based systems It is in particular suitable as a textbook for graduate level students in AI operations research and applied probability A solid mathematical background is necessary for reading this book Essential parts of the material have been the subject of courses given by the first author for students of computer science and mathematics held since 1984 at the University in Braunschweig

Fundamentals of Uncertainty Calculi with Applications to Fuzzy Inference

Michel Grabisch,Hung T. Nguyen,E.A. Walker,2013-04-17 With the vision that machines can be rendered smarter we have witnessed for more than a decade tremendous engineering efforts to implement intelligent systems These attempts involve emulating human reasoning and researchers have tried to model such reasoning from various points of view But we know precious little about human reasoning processes learning mechanisms and the like and in particular about reasoning with limited imprecise knowledge In a sense intelligent systems are machines which use the most general form of human knowledge together with

human reasoning capability to reach decisions Thus the general problem of reasoning with knowledge is the core of design methodology The attempt to use human knowledge in its most natural sense that is through linguistic descriptions is novel and controversial The novelty lies in the recognition of a new type of uncertainty namely fuzziness in natural language and the controversy lies in the mathematical modeling process As R Bellman 7 once said decision making under uncertainty is one of the attributes of human intelligence When uncertainty is understood as the impossibility to predict occurrences of events the context is familiar to statisticians As such efforts to use probability theory as an essential tool for building intelligent systems have been pursued Pearl 203 Neapolitan 182 The methodology seems alright if the uncertain knowledge in a given problem can be modeled as probability measures
