Next Generation Computing Roadmap Mark Sawyer,Mark Parsons,Csilla Zsigri,Ian Morgan,Ashley Stewart,2014 Over the years computing has evolved to OCLCbr D0 nearly always on OCLCbr D0 web based mobile computing devices In the near future we can expect that hardware will become a commodity and the value will be in the software to drive it and the data it generates The data deluge will require an infrastructure that can transfer and store the data and computing systems that can analyse and extract value from data in real time There are arguments suggesting that the computing sector will become increasingly polarised between small application specific computing units that connect to provide system services and larger more powerful units that will be required to analyse large volumes of data in real time This report presents a vision of next generation computing for the next 10 15 years It does this by developing a number of visionary scenarios covering key areas of everyday life Starting from these scenarios we present a series of technology roadmaps associated research development innovation challenges and recommendations for Europe to exploit the opportunities offered by the next generation of computing Seven scenarios were carefully developed to address critical aspects of society and economy Describing how computing will evolve in each of the scenarios has allowed us to describe a series of technology needs that by considering Europe OCLCbr D0 s current strengths and weaknesses in computing we could translate into research and innovation challenges for Europe and into value creation opportunities for the European industry
