

## HOME WORK 2

For each question, analyses the given MATLAB code solution then develop Algorithm and Flowchart for the code. Develop the Python code for each question.

**Problem 1.** In chemistry, the pH of an aqueous solution is a measure of its acidity. The pH scale ranges from 0 to 14, inclusive. A solution with a pH of 7 is said to be neutral, a solution with a pH greater than 7 is basic, and a solution with a pH less than 7 is acidic. Write a script that will prompt the user for the pH of a solution, and will print whether it is neutral, basic, or acidic. If the user enters an invalid pH, an error message will be printed.

**Solution:**

```
% whether it is basic, acidic, or neutral
ph = input('Enter the pH of the solution: ');
if ph >= 0 && ph <= 14
    if ph < 7
        disp('It is acidic')
    elseif ph == 7
        disp('It is neutral')
    elseif ph > 7
        disp('It is basic')
end
else
    disp('Error in pH!')
end
```
