**Combinatorial Optimization** Mustafa Akgül, Horst W. Hamacher, Süleyman Tüfekci, 2012-12-06 There have been significant developments in the theory and practice of combinatorial optimization in the last 15 years This progress has been evidenced by a continuously increasing number of international and local conferences books and papers in this area This book is also another contribution to this burgeoning area of operations research and optimization This volume contains the contributions of the participants of the recent NATO Advanced Study Institute New Frontiers in the Theory and Practice of Combinatorial Optimization which was held at the campus of Bilkent University in Ankara Turkey July 16-29 1990 In this conference we brought many prominent researchers and young and promising scientists together to discuss current and future trends in the theory and practice of combinatorial optimization The Bilkent campus was an excellent environment for such an undertaking Being outside of Ankara the capital of Turkey Bilkent University gave the participants a great opportunity for exchanging ideas and discussing new theories and applications without much distraction One of the primary goals of NATO ASIs is to bring together a group of scientists and research scientists primarily from the NATO countries for the dissemination of advanced scientific knowledge and the promotion of international contacts among scientists We believe that we accomplished this mission very successfully by bringing together 15 prominent lecturers and 45 promising young scientists from 12 countries in a university environment for 14 days of intense lectures presentations and discussions

**Optimization of Temporal Networks under Uncertainty** Wolfram Wiesemann,2012-01-04 Many decision problems in Operations Research are defined on temporal networks that is workflows of time consuming tasks whose processing order is constrained by precedence relations For example temporal networks are used to model projects computer applications digital circuits and production processes Optimization problems arise in temporal networks when a decision maker wishes to determine a temporal arrangement of the tasks and or a resource assignment that optimizes some network characteristic e g the time required to complete all tasks The parameters of these optimization problems e g the task durations are typically unknown at the time the decision problem arises This monograph investigates solution techniques for optimization problems in temporal networks that explicitly account for this parameter uncertainty We study several formulations each of which requires different information about the uncertain problem parameters
