

SEMANTICS

Semantics is the branch of linguistics that deals with studying meaning in language. It examines the meaning of words, phrases, sentences, and language.

OVERVIEW

Semantics looks at literal and implied meanings, the connotations words may carry, and how these meanings can change across different contexts. It also studies the relationships between words and phrases, like synonymy (words with the same or similar meanings), antonymy (words with opposite meanings), and polysemy (words or phrases with multiple, related meanings).

EXAMPLE

Interpreting Irony: Irony refers to when someone says one thing but means another, often conveying implied criticism or sarcasm. For example, if someone says, "What a great day!" while standing in pouring rain, this would be ironic because it implies disappointment with the current situation despite saying otherwise through their words.

Problems Of Semantics:

Problems of Semantics L. Tondl, 2012-12-06 Ladislav Tondl's insightful investigations into the language of the sciences bear directly upon some decisive points of confrontation in modern philosophy of science and of language itself. In the decade since his *Scientific Procedures* was published in English (Boston Studies 11), Dr. Tondl has enlarged his original monograph of 1966 on the promise, problems, and achievements of modern semantics. The main topic of his later work has been semantic information theory. A Russian translation, considerably expanded as a second edition, was published in 1975 (Moscow: Progress Publishers) with an appreciative critical commentary in the form of a conclusion by Professor Avenir I. Uemov of Odessa. Indeed, many Soviet studies in the problems of the semantics of science show the same sort of philosophical curiosity about the relationship of meanings in scientific language to procedures in scientific epistemology that characterizes Tondl's work as in the work of Mirislav Popovich (Kiev) and Vadim Sadovsky (Moscow) and their colleagues. But we know that interest in these matters is world-wide, ranging from such classical topics as sense and denotation, empiricist reduction, vagueness, and denotational opacity to the new and equally exciting topics of the semantics of non-unique preference choices, the nuances of informational synonymy, and the semantics of a picture shape, so briefly but beautifully sketched in Tondl's dense and promising last chapter. We are pleased to have had Tondl's kind cooperation in producing this English edition, actually a third edition of his research about semantics.

Ladislav Tondl, 1966 **Semantic Problems of Translation. An Analysis of Driller and Kornelius' examination of semantic predicaments**, 2023-07-19 Seminar paper from the year 2023 in the subject English Language and Literature Studies, Linguistics, grade 2-3, University of Wuppertal, language: English, abstract: This paper will revisit Driller and Kornelius' examination of the semantic predicaments inherent in translation. Furthermore, it will include an evaluative analysis of their findings and suggest potential remedies for circumventing such semantic obstacles in translation. The objective of this term paper is to provide a broad overview of this subject matter: how semantic problems in translation can be avoided and encourage further research in this field. Due to the limited scope of this assignment, it will not delve extensively into specific subfields of semantics. I will provide a comprehensive analysis of the arguments presented by Driller and Kornelius, followed by my critical evaluation. Finally, I will propose potential solutions to mitigate semantic issues in translation. The problem of semantic difficulties in the process of translating is a matter of great importance in worldwide communication. By conducting a thorough examination of the research carried out by Driller and Kornelius and offering practical solutions, experts in language and translation can guarantee precise and culturally aware translations.
