[Introduction to Environmental Analysis](#) Roger N. Reeve, 2002-02-25 Provides information on the application of analytical techniques such as GC LC IR and XRF for analysing and measuring water solid and atmospheric samples and for monitoring environmental pollutants Emphasizes Field Analysis reflecting the growing application of this technique Information on sampling strategies reflecting growth in this area Includes sections on solid and

liquid extraction techniques Ideal as a self study aid or as a taught course

Sample Handling and Trace Analysis of Pollutants Damia Barcelo,2000-03-08 This book is an updated completely revised version of a previous volume in this series entitled ENVIRONMENTAL ANALYSIS Techniques applications and quality assurance The book treats different aspects of environmental analysis such as sample handling and analytical techniques the applications to trace analysis of pollutants mainly organic compounds and quality assurance aspects including the use of certified reference materials for the quality control of the whole analytical process New analytical techniques are presented that have been developed significantly over the last 6 years like solid phase microextraction microwave assisted extraction liquid chromatography mass spectrometric methods immunoassays and biosensors The book is divided into four sections The first describes field sampling techniques and sample preparation in environmental matrices water soil sediment and biota The second section covers the application areas which are either based on techniques like the use of gas chromatography atomic emission detection immunoassays or coupled column liquid chromatography or on specific application areas like chlorinated compounds pesticides phenols mycotoxins phytotoxins radionuclides industrial effluents and wastes including mine waste Validation and quality assurance are described in the third section together with the interpretation of environmental data using advanced chemometric techniques The final section reports the use of somewhat advanced analytical methods usually more expensive less routinely used or less developed for the determination of pollutants
