Valve World Justin Wallace McEachren,1928 *Forever Recognize Others' Greatness* Sarah McVanel,Brenda Zalter-Minden,2015-12-15 According to countless engagement surveys and polls the majority of employees today want to feel more valued and to contribute in more meaningful ways The results of disengagement are devastating Top talent is considering or acting on their exit plan Employees who remain are blocked from giving their talents passions and virtues to their workplace Organizations are failing to satisfy their customers and are missing opportunities to innovate and keep their business viable It doesn't have to be this way In this book based on their new recognition approach FROGTM Forever Recognize Others Greatness Sarah McVanel and Brenda Zalter Minden show what happens when leaders and employees pay close attention to the essential greatness within themselves and one another Employees no matter what their skill set and across every industry are motivated to leverage their skills and passion Teams flourish Top talent is retained And the mission of the organization is achieved Using numerous examples of success from their consulting work the authors call for a revolutionary approach to recognition that is solution focused affirming what is already working for each and every person rather than emphasizing failures and problems Imagines best possible scenarios for individuals teams and organizations Sets a strengths based plan for individuals with clear next steps Becomes a continuous process in which everyone contributes to the humanity of their workplace one positive intent at a time Trust in Social Media Jiliang Tang,Huan Liu,2022-06-01 Social media greatly enables people to participate in online activities and shatters the barrier for online users to create and share information at any place at any time However the explosion of user generated content poses novel challenges for online users to find relevant information or in other words exacerbates the information overload problem On the other hand the quality of user generated content can vary dramatically from excellence to abuse or spam resulting in a problem of information credibility The study and understanding of trust can lead to an effective approach to addressing both information overload and credibility problems Trust refers to a relationship between a trustor the subject that trusts a target entity and a trustee the entity that is trusted In the context of social media trust provides evidence about with whom we can trust to share information and from whom we can accept information without additional verification With trust we make the mental shortcut by directly seeking information from trustees or trusted entities which serves a two fold purpose without being overwhelmed by excessive information i.e mitigated information overload and with credible information due to the trust placed on the information provider i.e increased information credibility Therefore trust is crucial in helping social media users collect relevant and reliable information and trust in social media is a research topic of increasing importance and of practical significance This book takes a computational perspective to offer an overview of characteristics and elements of trust and illuminate a wide range of computational tasks of trust It introduces basic concepts deliberates challenges and opportunities reviews state of the art algorithms and elaborates effective evaluation methods in the trust study In particular

we illustrate properties and representation models of trust elucidate trust prediction with representative algorithms and demonstrate real world applications where trust is explicitly used As a new dimension of the trust study we discuss the concept of distrust and its roles in trust computing
