Metronomic Society:

The Metronomic Society Michael Dunlop Young, 1988 Discusses the nature of time its perception natura rhythms biological cycles the timing of social behavior human habits artifacts customs and traditions *The Metronomic Society* Michael Dunlop Young, 1988 Time Helga Nowotny, 2018-03-12 Helga Nowotny s exploration of the forms and meaning of time in contemporary life is panoramic without in any way partaking of the blandness of a survey From the artificial time of the scientific laboratory to the distinctively modern yearning for one s own time she regards every topic in this wide ranging book from a fresh angle of vision one which reveals unsuspected affinities between the bravest newest worlds of global technology and the most ancient worlds of myth Lorraine Daston University of Chicago This book represents a major contribution to the understanding of time giving particular attention to time in relation to modernity The development of industrialism the author points out was based upon a linear and abstract conception of time Today we see that form of production and the social institutions associated with it supplanted by flexible specialization and just in time production systems New information and communication technologies have made a fundamental impact here But what does all this mean for temporal regimes How can we understand the transformation of time and space involved in the bewildering variety of options on offer in a postmodern world The author provides an incisive analysis of the temporal implications of modern communication She considers the implications of worldwide simultaneous experience made possible by satellite technologies and considers the reorganization of time involved in the continuous technological innovation that marks our era In this puzzling universe of action how does one achieve a time of one s own The discovery of a specific time perspective centred in the individual she shows expresses a yearning for forms of experience that are subversive of established institutional patterns This brilliant study became a classic in Germany will be of interest to students and professionals working in the areas of social theory sociology politics and anthropology Real History Martin Bunzl, 2005-06-20 Real History is a fascinating and essential read for all those interested in a reconciliation of the debates about the methodology and study of the philosophy of history The Architecture of Resonance Sarah Robinson, 2025-12-04 The profound impact that design has on human experience physically emotionally cognitively or ecologically is now well established And while this experiential and affective turn in architecture is gaining momentum studio time remains primarily dedicated to the creation of buildings as independent objects with minimal regard for the interactions and impacts those buildings may have on their inhabitants and their surroundings This book carefully details an alternative for thinking and designing that shifts attention from abstract formalism and object orientation to the creation of dynamic interacting fields of affective tactile kinaesthetic ecological and social engagement The book articulates resonance as a model and metaphor for the way we interact with our environments The word s literal meaning is to re sound implying a surface or receptive body that amplifies and alters the sound an interdependent relation and process occurring in between Seven kinds of resonance specific to design are detailed

theoretically and illustrated with practical and historical examples These design strategies demonstrate the possibilities resulting from shifting attention and resources from the longstanding preoccupation with fixed forms towards structuring and supporting dynamic interactive relationships between the built and the natural and between people and place Seamlessly combining architecture with cognitive science and neuroscience environmental and evolutionary psychology and social theory and anthropology in clear direct and engaging prose this book will be essential reading for all architecture students as well as those in these varied fields

Time and Social Theory Barbara Adam,2013-03-01 Time is at the forefront of contemporary scholarly inquiry across the natural sciences and the humanities Yet the social sciences have remained substantially isolated from time related concerns This book argues that time should be a key part of social theory and focuses concern upon issues which have emerged as central to an understanding of today s social world Through her analysis of time Barbara Adam shows that our contemporary social theories are firmly embedded in Newtonian science and classical dualistic philosophy She exposes these classical frameworks of thought as inadequate to the task of conceptualizing our contemporary world of standardized time computers nuclear power and global telecommunications
