Wolfgang Kalkofen

Methods In Radiative Transfer:

Methods in Radiative Transfer Wolfgang Kalkofen, 1984-04-26 **Radiative Transfer in Moving Media** K.K. Sen, S.J. Wilson, 1998-06 The advancement of observational techniques has led to the discovery of a large number of stars exhibiting complex spectral structures This necessitates the search for new methods to study the radiative transfer in such stars This book presents mathematical methodologies developed for solving radiation transfer problems in moving media and stellar atmospheres

Radiative Transfer Hélène Frisch, 2022-05-26 This book discusses analytic and asymptotic methods relevant to radiative transfer in dilute media such as stellar and planetary atmospheres Several methods providing exact expressions for the radiation field in a semi infinite atmosphere are described in detail and applied to unpolarized and polarized continuous spectra and spectral lines Among these methods the Wiener Hopf method introduced in 1931 for a stellar atmospheric problem is used today in fields such as solid mechanics diffraction theory or mathematical finance Asymptotic analyses are carried out on unpolarized and polarized radiative transfer equations and on a discrete time random walk Applicable when photons undergo a large number of scatterings they provide criteria to distinguish between large scale diffusive and non diffusive behaviors typical scales of variation of the radiation field such as the thermalization length and specific descriptions for regions close and far from boundaries Its well organized synthetic view of exact and asymptotic methods of radiative transfer makes this book a valuable resource for both graduate students and professional scientists in astrophysics and beyond

Analytical Methods in Radiative Transfer Alexander Kokhanovsky, Vijay Natraj, Dmitry Efremenko, 2025-11-24 Provides in depth knowledge of the physics of radiative transfer In Analytical Methods in Radiative Transfer a team of distinguished researchers delivers a comprehensive exploration of solutions to practical problems of modern atmospheric optics related to solar light interaction with the terrestrial atmosphere and the remote sensing of clouds aerosols and gases The authors describe analytic methods in radiative transfer that help explain atmospheric phenomena The book includes discussions on the interaction of solar light with the atmosphere Readers will also benefit from thorough reviews of various analytical radiative transfer techniques for various turbid media including media with phase functions extended in the forward direction and also semi infinite non absorbing weakly absorbing and strongly absorbing light scattering media Analytical Methods in Radiative Transfer also includes A thorough introduction to exact solutions of the radiative transfer equation including situations of single scattering as well as isotropic and Rayleigh scattering A comprehensive exploration of approximate solutions for scalar radiative transfer including single and multiple light scattering separation and the case of semi infinite media such as snow In depth examinations of the applications of analytical methods in atmospheric radiative transfer including aerosol remote sensing cloud remote sensing and the remote sensing of trace gases Perfect for meteorologists climatologists and graduate students studying physics Analytical Methods in Radiative Transfer is also an indispensable resource for geophysicists seeking a practical exploration of modern atmospheric optics

Moment Methods for Radiative Transfer Matthias Schäfer, 2008 **Radiative Transfer In Curved Media** K K Sen, S J Wilson, 1990-02-01 Most of the methods described in this book can be used with cosmetic modifications to solve transfer problems of greater complexity All attempts have been made to make the book self contained **Lecture Notes on New Methods in Radiative Transfer** I. P. Grant, 1968 ANALYTICAL METHODS IN RADIATIVE TRANSFER THEORY. D. I Nagirner, 2006 **Numerical Solution Methods for Radiative Transfer in Semitransparent Media** Frank Zingsheim, 1999 *Numerical Methods in Multidimensional Radiative Transfer* Guido Kanschat, Erik Meinköhn, Rolf Rannacher, Rainer Wehrse, 2008-12-24 Traditionally radiative transfer has been the domain of astrophysicists and climatologists In nuclear technology one has been dealing with the analogous equations of neutron transport In recent years applications of radiative transfer in combustion machine design and in medicine became more and more important In all these disciplines one uses the radiative transfer equation to model the formation of the radiation field and its propagation For slabs and spheres effective algorithms for the solution of the transfer equation have been available for quite some time In addition the analysis of the equation is quite well developed Unfortunately in many modern applications the approximation of a 1D geometry is no longer adequate and one has to consider the full 3D dependencies This makes the modeling immensely more intricate The main reasons for the difficulties result from the fact that not only the dimension of the geometric space has to be increased but one also has to employ two angle variables instead of one and very often one has to consider frequency coupling due to motion or redistribution in spectral lines In actual calculations this leads to extremely large matrices which in addition are usually badly conditioned and therefore require special care Analytical solutions are not available except for very special cases Although radiative transfer problems are interesting also from a mathematical point of view mathematicians have largely neglected the transfer equation for a long time *Mathematical Models and Numerical Methods for Radiative Transfer* C. Berthon, Jean-François Coulombel, 2009 **Radiative Transfer in Stellar and Planetary Atmospheres** Lucio Crivellari, Sergio Simón-Díaz, María Jesús Arévalo, 2020-01-09 An essential overview of the physical and mathematical background of radiative transfer and its applications to stellar and planetary atmospheres **Radiative Heat Transfer** Michael F. Modest, 2003-03-07 The basic physics of radiative heat how surfaces emit reflect and absorb waves and how that heat is distributed Numerical Transport and Diffusion Methods in Radiative Transfer Ronaldo Henriques Szilard, 1992 **Radiation Heat Transfer** J. Robert Mahan, 2002-06-03 Thermal radiation plays a critical role in our everyday lives from heating our homes and offices to controlling the temperature of the earth's atmosphere Radiation Heat Transfer presents a comprehensive foundation in the basics of radiative heat transfer with focused coverage of practical applications This versatile book is designed for a two semester course but can accommodate one semester courses emphasizing either traditional methods of radiation heat transfer or a statistical formulation specifically the Monte Carlo ray trace MCRT method Radiation Heat Transfer enables the uninitiated reader to formulate accurate models of advanced radiative systems without

neglecting the complexity of the systems The traditional methods covered here including the net exchange formulation are mainstays in the industry Also included is a step by step presentation of the more modern and technically accurate MCRT method which has become increasingly relevant with today's availability of inexpensive computing power As part of this book's comprehensive coverage of the MCRT formulation it is packaged with a CD ROM that includes The student version of FELIX The essential program for this book it computes the exchange coefficients needed to solve problems of radiative heat transfer analysis using both the traditional and statistical methods A Mie scattering program This program solves classic problems in radiative heat transfer by particles such as atmospheric aerosols An invaluable book for undergraduate and graduate students in courses on radiative heat transfer as well as engineers and researchers in areas related to power generation solar power refrigeration and cryogenics including general mechanical chemical electronics and materials engineering

Radiative Transfer in Coupled Environmental Systems Knut Stamnes, Jakob J. Stamnes, 2016-03-18
Radiative Transfer in Coupled Environmental Systems This book discusses radiative transfer in coupled media such as atmosphere ocean systems with Lambertian as well non Lambertian reflecting surfaces at the lower boundary The spectral range from the ultraviolet to the microwave region of the electromagnetic spectrum is considered and multi spectral as well as hyperspectral remote sensing is discussed Solutions of the forward problem for unpolarized and polarized radiation are discussed in considerable detail but what makes this book unique is that formulations and solutions of the inverse problem related to such coupled media are covered in a comprehensive and systematic manner This book teaches the reader how to formulate and solve forward and inverse problems related to coupled media and gives examples of how to solve concrete problems in environmental remote sensing of coupled atmosphere surface systems From the contents Inherent Optical Properties IOPs Basic Radiative Transfer Theory Forward Radiative Transfer Modeling The Inverse Problem Applications

Radiation Transfer Apresyan, 1996-11-01 The authors expound on non traditional phenomena for transfer theory which are nevertheless of considerable interest in wave measurements and bring the advances of transfer theory as close as possible to the practical needs of those working in all areas of wave physics The book opens with a historical overview of the topic then moves on to examine the phenomenological theory of radiative transport blending traditional theory with original ideas The transport equation is derived from first principles and the ensuing discussion of the diffraction content of the transport equation and non classical radiometry is illustrated by practical examples from various fields of physics Popular techniques of solving the transport equation are discussed paying particular attention to wave physics and computing the coherence function The book also examines various problems which are no longer covered by the traditional radiative transfer theory such as enhanced backscattering and weak localization phenomena nonlinear transport problems and kinetic equations for waves This monograph bridges the gap between the simple power balance description in radiative transfer theory and modern coherence theory It will be of interest to researchers and professionals working across a wide range of

fields from optics acoustics and radar theory to astrophysics radioastronomy and remote sensing as well as to students in these areas

Nonlinear Response Matrix Methods for Radiative Transfer. [Radiative Transfer]. ,1987 A nonlinear response matrix formalism is presented for the solution of time dependent radiative transfer problems The essential feature of the method is that within each computational cell the temperature is calculated in response to the incoming photons from all frequency groups Thus the updating of the temperature distribution is placed within the iterative solution of the spaceangle transport problem instead of being placed outside of it The method is formulated for both grey and multifrequency problems and applied in slab geometry The method is compared to the more conventional source iteration technique 7 refs 1 fig 4 tabs

Numerical Radiative Transfer Wolfgang Kalkofen,1988-01-07 First published in 1988 this book is a manual of methods for solving problems in radiative transfer Several of the methods on operator perturbation as well as on polarised radiative transfer appeared for the first time in this volume and the sections dealing with these topics each include introductory articles The methods described are principally directed at astrophysical plasmas but the methods are easily adaptable to applications involving other media where self absorption of the radiation is important The book is primarily intended for graduate students and research workers in the field of radiative transfer

An Introduction to Radiative Transfer Annamaneni Peraiah,2002 This 2001 book presents the methodologies used by astrophysicists for solving the radiative transfer equation
