Perception Thomas L. Bennett,1973-01-01 *The Speech Processing Lexicon* Aditi Lahiri,Sandra Kotzor,2017-04-10 In this book some of today s leading neurolinguists and psycholinguists provide insight into the nature of phonological processing using behavioural measures computational modeling EEG and fMRI The essays cover a range of topics including categorization acoustic variability and invariance underspecification talker specificity and machine learning focusing on the acoustics perception acquisition and neural representation of speech **The effect of hearing loss on neural processing** Jonathan E. Peelle,Arthur Wingfield,2015-06-03 Efficient auditory processing requires the rapid integration of transient sensory inputs This is exemplified in human speech perception in which long stretches of a complex acoustic signal are typically processed accurately and essentially in real time Spoken language thus presents listeners auditory systems with a considerable challenge even when acoustic input is clear However auditory processing ability is frequently compromised due to congenital or acquired hearing loss or altered through background noise or assistive devices such as cochlear implants How does loss of sensory fidelity impact neural processing efficiency and health How does this ultimately influence behavior This Research Topic explores the neural consequences of hearing loss including basic processing carried out in the auditory periphery computations in subcortical nuclei and primary auditory cortex and higher level cognitive processes such as those involved in human speech perception By pulling together data from a variety of disciplines and perspectives we gain a more complete picture of the acute and chronic consequences of hearing loss for neural functioning Springer Handbook of Speech Processing Jacob Benesty,M. M. Sondhi,Yiteng Huang,2007-11-22 From common consumer products such as cell phones and MP3 players to more sophisticated projects such as human machine interfaces and responsive robots speech technologies are now everywhere Many think that it is just a matter of time before more applications of the science of speech become inescapable in our daily life This handbook is meant to play a fundamental role for sustainable progress in speech research and development Springer Handbook of Speech Processing targets three categories of readers graduate students professors and active researchers in academia and research labs and engineers in industry who need to understand or implement some specific algorithms for their speech related products The handbook could also be used as a sourcebook for one or more graduate courses on signal processing for speech and different aspects of speech processing and applications A quickly accessible source of application oriented authoritative and comprehensive information about these technologies it combines the established knowledge derived from research in such fast evolving disciplines as signal processing and communications acoustics computer science and linguistics *Adaptive Processes in Visual and Oculomotor Systems* Edward L.
