

# A Theoretical Computer Science Perspective on Free Will

Lenore Blum<sup>1</sup> and Manuel Blum<sup>2</sup>

## Abstract

We consider the paradoxical concept of free will from the perspective of Theoretical Computer Science (TCS), a branch of mathematics concerned with understanding the underlying principles of computation and complexity, including the implications and surprising consequences of resource limitations.

The concept of **free will** is paradoxical. It puzzled Lucretius (100-50 BCE) [1]:

“If all movement is always interconnected, the new arising from the old in a determinate order – if the atoms never swerve so as to originate some new movement that will snap the bonds of fate, the everlasting sequence of cause and effect - what is the source of the free will possessed by living things throughout the earth?”

It puzzled Samuel Johnson (1709-1784) [2]:

“All science is against the freedom of the will; all experience is for it.”

In our opinion, Dehaene [3] solved the puzzle:

“Our states are clearly not uncaused and do not escape the laws of physics – nothing does. But our decisions are genuinely free whenever they are based on a conscious deliberation that proceeds autonomously, without any impediment, carefully weighing the pros and cons before committing to a course of action. When this occurs, we are correct in speaking of a voluntary decision – even if it is, of course, ultimately caused by our genes [and circumstances].”

Dehaene’s solution would surely have satisfied both Lucretius and Johnson. In what follows, we corroborate Dehaene’s solution with two formal definitions and our own independently-derived solution from the perspective of **Theoretical Computer Science (TCS)**.

The essence of TCS is the importance of *resource limitations*. *Computation time* in particular plays a significant role in resolving the paradox of free will. We define a **Conscious Turing Machine (CTM)** [4] that goes through life making choices. During whatever time it evaluates alternatives, before committing to any one of them, it rightly “feels” it has free will about its choices.

Our TCS perspective addresses the **paradox of free will** with the following definitions of **free will** and the *feeling of free will* in the CTM:

- **Free will** is the ability to violate physics.  
As violating physics is impossible<sup>1</sup>, no animal, machine, or CTM has free will.

<sup>3</sup> Violating the laws of physics in a deterministic world (like Conway’s Game of Life [11]) is clearly impossible. It is also impossible in the quantum world, where all actions are random selections from precise deterministically-defined (physicists call it calculable) probability distributions.
