Mellish,2012-12-06 Originally published in 1981 this was the first textbook on programming in the Prolog language and is still the definitive introductory text on Prolog Though many Prolog textbooks have been published since this one has withstood the test of time because of its comprehensiveness tutorial approach and emphasis on general programming applications Prolog has continued to attract a great deal of interest in the computer science community and has turned out to be a basis for an important new generation of programming languages and systems for Artificial Intelligence Since the previous edition of Programming in Prolog the language has been standardised by the International Organization for Standardization ISO and this book has been updated accordingly The authors have also introduced some new material clarified some explanations corrected a number of minor errors and removed appendices about Prolog systems that are now obsolete　　**Artificial Intelligence** J R Ennals,2014-05-23 Artificial Intelligence State of the Art Report is a two part report consisting of the invited papers and the analysis The editor first gives an introduction to the invited papers before presenting each paper and the analysis and then concludes with the list of references related to the study The invited papers explore the various aspects of artificial intelligence The analysis part assesses the major advances in artificial intelligence and provides a balanced analysis of the state of the art in this field The Bibliography compiles the most important published material on the subject of artificial intelligence and includes all the materials cited in the invited paper and analysis references　　*Logic Programming* I.
